SURYA N

CYBERSECURITY STUDENT | ETHICAL HACKER | PENETRATION TESTER

Coimbatore | suryanagalingam877@gmail.com | +91 9597571543 | www.linkedin.com/in/surya-nagalingam/

SUMMARY

Cybersecurity student with hands-on experience in web application security, vulnerability assessment, and responsible disclosure. Proficient in identifying and documenting critical security vulnerabilities including IDOR, XSS, SQL Injection, and GraphQL misconfigurations. Successfully identified and responsibly disclosed a critical OTP brute force and session replay vulnerability to CERT-In — India's national cybersecurity agency — which was officially acknowledged and registered as a formal case. Committed to ethical security research, responsible disclosure, and continuous learning in offensive security.

TECHNICAL SKILLS

IDOR / Broken Access Control	Burp Suite	Networking Fundamentals
XSS (Cross-Site Scripting)	Authentication Bypass	GraphQL Security
SQL Injection (SQLi)	Nmap	Server Side Template Injection

SECURITY RESEARCH & RESPONSIBLE DISCLOSURE

IDOR (Insecure Direct Object Reference) Vulnerability — railfeast.com **2026**

Reported to CERT-In (India's National Cybersecurity Agency)

- Identified an IDOR vulnerability that could allow unauthorized access to sensitive user information by manipulating object identifiers
- Documented the proof of concept and assessed the potential impact on user privacy and sensitive data
- Submitted a responsible disclosure report to CERT-In for further action

GraphQL Injection & Introspection Vulnerability — railfeast.com **2026**

Reported to CERT-In (India's National Cybersecurity Agency)

- Identified GraphQL introspection exposure revealing sensitive schema fields, including password, accountNumber, ifscCode, and bankName
- Assisted in documenting the vulnerability and assessing its potential security impact
- Submitted the findings through a responsible disclosure report to CERT-In

PROJECTS

Domain Analyzer **2026**

Repository: https://github.com/suryanagalingam877-code/domain-security-analyzer.git

- Developed a tool to analyze domain information and identify publicly available details.
- Performed DNS and domain reconnaissance to gather relevant information.
- Analyzed domain records and security-related information.
- Automated the reconnaissance process to improve efficiency.

Phishing Mail Detector **2026**

Repository: https://github.com/suryanagalingam877-code/securemail.git

- Developed a tool to detect and identify potential phishing emails.
- Analyzed email content and characteristics to identify suspicious patterns.
- Implemented detection techniques to distinguish phishing emails from legitimate emails.
- Focused on improving email security and reducing phishing-related risks.

Surface Attack

Reconnaissance Tool **2026**

Repository: https://github.com/suryanagalingam877-code/surface-attack.git

- Developed a cybersecurity tool for identifying and analyzing an organization’s attack surface.
- Performed reconnaissance to discover exposed domains, subdomains, ports, and services.
- Collected and organized publicly accessible information about target assets.
- Analyzed discovered assets to identify potential security weaknesses.

EDUCATION

Bachelor of Engineering in Computer Science Engineering (Cyber Security) **2024 – 2028 (Expected)**

CMS College of Engineering and Technology

- 3rd Year student specializing in Cybersecurity — covering network security, web application security, ethical hacking, and digital forensics - Actively applying academic knowledge through independent security research and responsible disclosure to national authorities

ADDITIONAL INFORMATION

- **Tools & Platforms:** Burp Suite, Nmap, Kali Linux, SQLMap
- **Areas of Interest:** Web Application Penetration Testing, Bug Bounty Hunting, Vulnerability Research, API Security
- **Recognition:** CERT-In officially acknowledged responsible disclosure and registered it as a formal case (2026)
- **Languages:** English, Tamil
